# The Structure and Function of Multilateral Aid Institutions

ER RP 75-17 June 1975

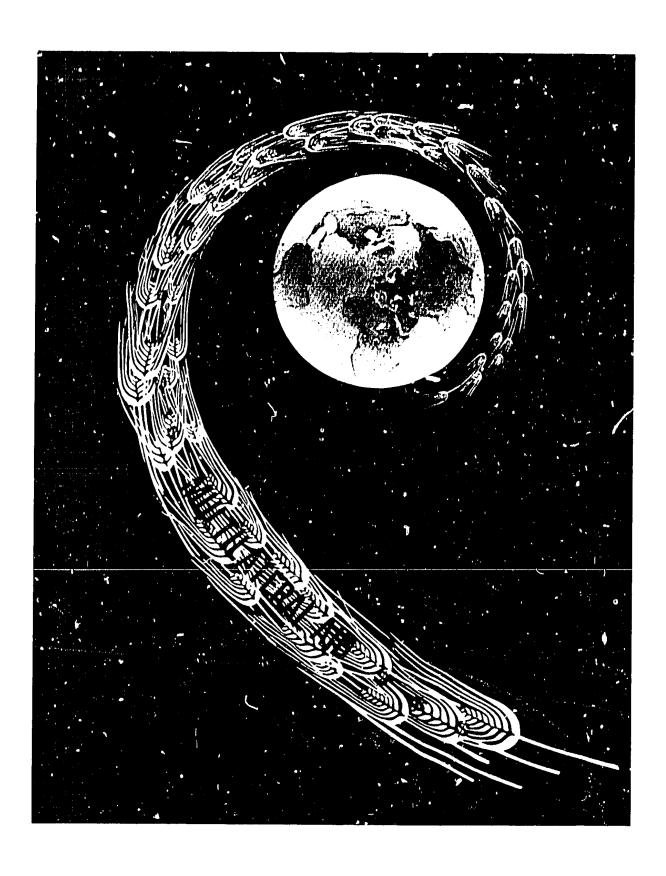

## Approved For Release 2000/09/14: CIA-RDP86T00608R000500230017-5 FOR OFFICIAL USE ONLY

### Foreword

This publication is intended to serve as a general reference on multilateral assistance to the LDCs: the institutions involved, their purpose, membership, and funding. It also provides estimates of the amount of multilateral aid provided to LDCs in 1974.

The data were derived from official sources, where available, and supplemented by estimates that are conservative.

The Office of Economic Research has published other aid-related reports dealing with multilateral and bilateral aid to LDCs.

## Approved For Release 2000/09/14: CIA-RDP86T00608R000500230017-5 FOR OFFICIAL USE ONLY

## THE STRUCTURE AND FUNCTION OF MULTILATERAL AID INSTITUTIONS

#### KEY FINDINGS

- 1. There are now 14 major multilateral aid institutions dispensing aid to less developed countries (LDCs). Some, such as the World Bank Group and the International Monetary Fund (IMF), carry out worldwide operations. Others, such as those sponsored by the Organization of Petroleum Exporting Countries (OPEC), operate exclusively within a selective regional or cultural framework (see the centerfold).
  - Multilateral institutions as a group committed about US \$9 billion to LDCs in 1974, an increase of nearly 60% from 1973. Disbursements topped \$4.5 billion.
  - The World Bank Group remained the leading donor; the IMF Oil Facility, funded primarily by OPEC, also made a major contribution.
  - Non-project assistance to meet emergency needs of the LDCs formed a large portion of multilateral aid - \$3 billion.
- 2. We foresee no further additions to the list of major multilateral institutions for several years, although new aid outlets may develop within the established structures. OPEC will continue to be a major source of funding for these institutions. In the short run, emergency aid will continue to account for a significant share of the total. We expect project aid gradually to return to prominence, with the World Bank Group and IMF taking on increased responsibilities for channeling assistance.

#### **DISCUSSION**

## The Institutions

3. Multilateral assistance – a direct outgrowth of post-World War II international efforts to help reconstruct Europe's war-damaged economies – has developed into a complex of 14 major institutions plus their subsidiary agencies.

Note: Comments and queries regarding this publication are welcomed. They may be directed to of the Office of Economic Research, Code 143, Extension 5291. **STATINTL** 

These institutions provided some \$9 billion (see Table 1) of aid to LDCs<sup>1</sup> in 1974, accounting for about one-third of all official aid pledged.<sup>2</sup> Among them, UN agencies, including the World Bank and International Monetary Fund, accounted for more than two-thirds of the total, regional institutions about one-fifth, European Community-sponsored institutions 7%, and the new Arab-sponsored agencies 4%. This distribution follows roughly the pattern of recent years, except that regional banks had smaller shares (see Table 2).

- 4. The World Bank (IBRD); its soft loan affiliate, the International Development Agency (IDA); and the International Monetary Fund (IMF), which provides 7-year credits through the new Oil Facility (see Table 3). are the major sources of global multilateral financial assistance. Other agencies of the United Nations also provide small amounts of technical, social, and commodity assistance on a worldwide basis (see Table 4). As a group, these multilateral organizations provided \$6.2 billion worth of aid during 1974.
- 5. Regional aid institutions did not emerge until 1959 with the establishment of the Inter-American Development Bank (IDB). Subsequently, regional development banks have been established for all areas of the Third World (see Tables 5a, b, and c). They include banks for Central America, Africa, Asia, and most recently (in 1970) for the Caribbean. All of the regional banks emphasize assistance for regional social and economic development programs, especially multinational projects or projects of common concern. As a group, regional banks committed \$1.8 billion worth of aid during 1974.
- 6. The regional development bank concept follows a uniform pattern most are modeled after the World Bank. Usually the regional banks have been funded by capital subscriptions from developing nations, only part of which is paid in. This capital is used as guarantee for bond issues floated in private capital markets. Most of the banks also have established soft loan windows similar to that of the IDA that are funded by developed nation sponsors and by a part of the income from banking operations.
- 7. Beyond the two broad groupings those with global interests and those confined to specific regional interests there is a growing number of multilateral aid organizations bound together by mutual political, commercial, religious, or

<sup>1.</sup> The LDCs include all countries of Africa except the Republic of South Africa; all countries of East Asia except Hong Kong and Japan; Malta, Portugal, Romania, Spain, and Yugoslavia in Europe; and all countries in Latin America, the Near East, and South Asia.

<sup>2.</sup> Aid from governments and international bodies whose members are governments.

<sup>3.</sup> The International Finance Corporation (IFC), also a World Bank affiliate, is not included as an aid donor, because it provides risk capital to private entities.

cultural in erests. Most important among these are the agencies associated with the European Community (EC) and, more recently, with the Arab states (see Tables 6 and 7a, b, and e). Together, such agencies accounted for about \$1 billion of aid in 1974. The EC has used the European Investment Bank (EIB), the European Development Fund (EDF), and the Cheysson Fund for emergency aid to perpetuate EC members' historic commercial ties with certain LDCs.

8. During 1974, special-interest aid outlets mushroomed under OPEC sponsorship. Indeed, for a time it appeared that there would be as many new multilateral OPEC-sponsored institutions as there were oil-exporting states, each seeking to provide aid to LDCs with close ethnic, religious, or political ties. Implementing the agreements was another story. Only three of the seven Arab agencies that had been set up were actually in operation by the end of 1974. Several special funds for African and Arab states and the Islamic Solidarity Fund were relegated to the status of administrative units within established financial organizations.

### Performance in 1974

- 9. Multilateral aid pledged to LDCs in 1974 equaled \$9 billion, \$3.3 billion above 1973. OPEC played a critical role in expanding multilateral aid activities, accounting for roughly 45% of all the aid channeled through these institutions. Influenced primarily by political considerations and high rates of return on secure investments, OPEC channeled about 4% of its oil receipts to LDCs through multilateral agencies. This included \$2.1 billion of OPEC purchases of World Bank bonds,<sup>4</sup> \$1 billion for the IMF Oil Facility, \$300 million to UN agencies, and \$350 million extended to LDCs directly by Arab multilateral organizations. An additional \$1 billion of OPEC funds was committed in capital subscriptions to Arab institutions.
- 10. The World Bank Group, with commitments of \$4.5 billion, continued as the principal source of multilateral aid to LDCs in 1974. It was followed by the regional bank groups that provided \$1.8 billion and the IMF Oil Facility with commitments of \$1.2 billion. The EC channels provided \$600 million. Arab multilateral agencies, still neophytes in the aid business, extended about \$350 million, all to Arab or African states.
- 11. During 1974, multilateral aid agencies disbursed about \$4.5 billion, up nearly 50% from 1973. A large share (40%) was provided for emergency assistance

<sup>4.</sup> Approximately \$1.5 billion was actually transferred by the end of 1974.

and came from the IMF Oil Facility, UN emergency operations, and those of the European Community and Arab states. The remaining \$2.7 billion was mostly project aid, previously committed by development banks.

### Characteristics of Multilateral Assistance

- 12. Multilateral aid has conventionally been intended to promote economic development, primarily for infrastructure projects. Multilateral agencies have concentrated their assistance on bankable projects i.e. projects able to pay the rates charged by private capital markets. Institutions providing this kind of aid and carrying the largest share of the aid burden (the World Bank and regional banks) charge near the commercial interest rates. These ranged up to 8%-8-1/4% in 1974. The credits allow 10-30 years for amortization. To accommodate equally basic needs for poorer LDCs that cannot afford these terms, a soft loan window has been established in most multilateral development banks. These windows usually offer low-interest or interest-free loans and allow up to 50 years for repayment. Eligibility for these soft loans usually requires some sort of poverty test such as a low per capita income level. Still an important component of the aid total, concessional lending fell to about 15% of total development aid in 1974, from 30% in 1973.
- 13. Most of the institutions provide technical assistance in order to assure the implementation of their programs. Technical aid activities, nevertheless, comprise less than 1% of the total outlays of these organizations. Most of the agencies administer the UN technical assistance programs as well as their own. Increasingly, they also are providing technical support for bilateral lending programs.
- 14. Inflation, accelerated by sharply increased prices for oil and food, created urgent LDC demands for emergency balance-of-payments assistance in 1974. These demands could not have been satisfied by the conventional multilateral organizations. A few UN agencies were equipped to provide emergency funds, but nowhere near the scale required. Only the creation of the IMF Oil Facility and the burgeoning Arab multilateral aid organizations made it possible for increased amounts of multilateral aid to reach the most seriously affected countries (MSAs),5 especially India, Pakistan, and Sahelian Africa. The new Arab facilities enhanced the options of a number of African and Arab nations because of softer terms and larger availabilities. In total, emergency resources in 1974 amounted to about \$1.8 billion. For the first time medium- and long-term balance-of-payments aid

<sup>5.</sup> Most seriously affected countries (MSAs) are defined by UN criteria to include low per capita income (not exceeding \$400), sharp increase in import costs of essentials relative to export earnings, high ratio of debt service to export earnings, and low level of foreign exchange reserves to meet requirements.

became an important aspect (20%) of multilateral assistance, although it was a far smaller part of the aid total than development assistance.

### **Prospects**

- 15. The proliferation of multilateral institutions will probably not continue, although additional concessional aid outlets are planned within the global institutions. OPEC will continue to be a major source of funding for multilateral assistance through agencies created by its members and through such institutions as the IBRD and IMF.
  - OPEC funding of global aid institutions will provide the major oil exporters with a sound investment and good return on their money.
  - Assistance from OPEC multilateral institutions will tend to parallel aid from established multilateral agencies.
  - Reliance on established institutions for feasibility studies and technical services will smooth the road for OPEC bilateral and multilateral aid implementation.
- 16. The established multilateral agencies, particularly the IBRD and the IMF, will take on increased responsibility for channeling aid. The World Bank is considering a 52% expansion of its annual commitments during the next five years, while the IMF Oil Facility is prepared to expand significantly its assistance in 1975, the last year of its existence. In addition, new aid channels are being considered, especially a Special Trust Fund within the IMF for long-range balance-of-payments assistance for the poorer LDCs and a third window in the IBRD to provide credits on terms between those of the World Bank and the IDA (30-year repayment after a 7-year grace at 4% interest).
- 17. Emergency operations will again be the focus of multilateral aid activities because of the threat to LDC solvency posed by the adjustments to increases in the cost of energy. Beyond the next year or two, long-term development efforts again are expected to take center stage. The LDCs, gaining more clout, will press for sustained programs of development. Multilateral channels, less subject to the vagaries of national political decisions, will be the aid vehicle that the LDCs will prefer.
